Java abstraction. Storage facility itself. RAM only in value varies.

```
array
length, say 4
if i ≤
4 different
values
```

Really:

```
int[] A = new int[4];
```
```java
int A[], new int[4]
int B[], new int[4]
A = B;
A[1] = -1
da[2] = 3
B[2] = 38
B[1] = 9999;
System.out.println(A[1]);
Surprise: 9999 not -1!
System.out.println(B[2]);
38
System.out.println(A[2]);
38
```
